Wall Guard Request for Quote

Directions for using this form:

1. Please use one form per type of wall guard required. (See selection of wall guard profiles available from WallGuard.com.)
2. Measure all areas that require wall guards and come up with a total linear footage.
3. Each section should start and finish with an end cap. Keep this in mind when you're taking off your material and enter a total number of end caps needed.
4. Determine how many outside corners you need and enter them.
5. If you are using corner guards to finish an outside corner, wall guards can't go around them. You will need to add two end caps for each junction.
6. Determine how many inside corners are required and enter them. Most people mitre or cope inside corners and no end caps are required. If the wall guards do not butt at the corner, add two end caps for each junction.
7. Finally, submit your request and we'll send back a quote ASAP!

How quickly do you need this quote? ASAP Same Day Next Day
